DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Ito (US Patent No. 6,376,167) and Ikari (US Patent No. 6,482,583).

Ito discloses a photothermographic substantially as claimed. See column 19 lines 30-67 which discloses silver halide include silver iodide having grain size of 10 nm to 80 nm and organic having halogen compound in column 17, compound (3)34 to (3)-35, column 9, compound (1) to (1)35. Ikari discloses the use of claimed compound of formula (1) to provide a photothermographic material with low fog, good photographic performance, even stored at high temperature in high humidity before image formation. See Akari, abstract and column 2, lines 36-41. It would have been obvious to the worker of ordinary skill in the art at the time the invention was made to use the mercapto compound taught in Ikari in the material of Ito for same reason as disclosed above, and thereby provide a material as claimed.

3. Claims 10-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ito (US Patent No. 6,376,167). Ito discloses a photothermographic substantially as claimed. See column 19 lines 30-67 which discloses silver halide includes silver iodide having grain size of 10 nm to 80 nm. See column 20 wherein the silver halide may contains ion of metals belong to groups 6-11 such as W, Fe, Co, Ni, Cu, Rh, Pd, Re, Os, Ir, Pt and Au; see also the noble material as

chemical sensitizer in column 21, lines 45-67, to column 22, lines 1-11. It would have been obvious to the worker of ordinary skill in the art at the time the invention was made to use the metal ions taught in Ito to increase the sensitivity of silver halide including silver iodide taught in Ito to provide the claimed invention. The metal ions serve similar function and it would have obvious to use a metal ion or a combination thereof with an expectation of achieving a similar results.
